Policy statement

The Management of Bonn & Mees Floating Sheerlegs B.V. is convinced that a policy focused on Quality, Occupational Health, Safety and Environment (QHSE) is important for compliance with applicable laws and regulations and reasonable demands of employees, clients and suppliers.

In a framework of working with and working at Bonn & Mees, the management strives to achieve safe, efficient and environmentally responsible business operations.

For the implementation of the policy, given the economic potential of Bonn & Mees Floating Sheerlegs B.V., the principle of the highest possible QHSE level has been chosen. The policy is aimed at continuously improving working at Bonn & Mees and working with Bonn & Mees. Bonn & Mees Floating Sheerlegs B.V. its primary aim is to comply with the international standard NEN-EN-ISO 9001, NEN-EN-ISO 14001 & OHSAS 18001.

The management is ultimately responsible for the organization of the QHSE control and thus, in addition to the proper operation and evaluation, for the maintenance and for the continuous improvement of the QHSE system. A QHSE Manager has been appointed for the execution of the above mentioned tasks, and who also takes care of the instruction and supervision of employees with regard to the construction and correct functioning of the QHSE system.

The decision was made to decentralize the QHSE system. The management is convinced that by guaranteeing responsibilities for the QHSE system at all levels and in all departments, the QHSE thinking, policy and system leads to a culture in which thinking in improvement processes contributes to the objectives of the organization, employees and relations.

Bonn & Mees Floating Sheerlegs B.V. is aware of the specific safety and environmental risks in carrying out its core activities. This means that preventive measures have been taken and will be taken in the future to promote safety and minimize environmental impact. Attempts will be made to prevent the occurrence of accidents and illness. Preventive activities include the training and instruction of all employees, maintenance and inspection of floating sheerlegs, tugs, machines and tools, recording and discussing hazards, hazardous situations, near misses and accidents. We give priority to the reduction of safety risks over the reduction of other risks.

It is our firm conviction that through QHSE care (both the assurance and the increase of efficiency) we can guarantee the best service to our customers and suppliers, and minimize the risks associated with carrying out our work. The mentality of our employees is extremely important in this case. Thinking and acting from a QHSE point of view must be in the blood of our employees. Information, training and addressing each other are essential for this. We continue to work on improving our quality, occupational health and environmental care and performance.

This statement is made by Bonn & Mees Floating Sheerlegs B.V. actively communicated to employees and is freely accessible in our computer system and hard copy manual. This statement is also included on our website, making it available to interested parties.

We try to implement this by introducing changes in working methods or processes, where necessary, in consultation with the employees. This policy is supported by all employees within our company.

H. L. van Viersen
Director
BONN & MEES FLOATING SHEERLEGS B.V.
